

ABSTRACT

A method for generating an object processing platform between an object computer and a processing computer, wherein an ad hoc assembly of screens is performed by the object computer with the processing computer in order to couple their input and/or output means. The method of the present invention includes generating an object processing platform between an object computer and a processing computer. An ad hoc screen assembly is performed by the object computer with the processing computer in order to couple their input and/or output means with at least one display.
